

## Geography Intent

At Neville's Cross, our curriculum is designed with either a Geography or History focus as the centre of each project. Within this design, there is at least one local focus because we believe this enables our children to place their learning in context. It is our intent that pupils make sense of their place in the local community, region and the world. Our outdoor school environment including forest school provides a safe and secure space for even our youngest children to use fieldwork skills to make observations, comparisons and links. Each Geography project begins with map skills, placing location in context. The starting point is always to refer to previous learning then geographical vocabulary is explicitly shared to ensure children are equipped with a practical tool kit to be a Geographer. The local area is rich in a range of environments to compare and well used by children during their time with us at Neville's Cross. Projects include trips to contrasting locations and all projects, whether Geography based or not, include regular opportunities to learn outdoors. Our curriculum is organised on a 2-year roll and carefully planned so that children have opportunities to revisit and review previous learning whilst acquiring new knowledge and skills.

## Introduction

At Neville's Cross School and Nursery we are committed to providing all children with learning opportunities to engage in Geography. This policy sets out a framework within which teaching and non-teaching staff can work, and gives guidance on planning, teaching and assessment.

The teaching of Geography would be difficult without acknowledging the future of our planet. The Geography Curriculum places great importance on the interaction between the physical and the human environment. Many areas of study give opportunities to make children aware of these effects upon their surroundings, their own responsibilities and how they can contribute to improving the environment, however small that contribution might be.

Geography is an essential part of the curriculum, it provides a means of exploring, appreciating and understanding the world in which we live and how it has evolved. Geography explores the relationship between the Earth and its people through the study of place, space and environment. It contributes to the cultural, social, spiritual and moral life of children as they acquire knowledge of a range of different cultures and traditions, and learn tolerance and understanding of other people and environments. Geography is the subject in which pupils learn the skills of understanding a locality and how and where people fit into its overall structure. Developing geographical skills is essential as children live in a world that is wide open to them. With opportunities to travel and work in different cities and countries across the world, pupils need to use efficiently maps, charts and other geographical data. The opportunities for the children to carry out geographical enquiry are also of value.

## **Aims**

The aims of geography are:

- To stimulate children's interest in their surroundings and develop a knowledge and understanding of the physical and human processes which shape places.
- To increase children's knowledge of other cultures and, in so doing, teach a respect and understanding of what it means to be a positive citizen in a multi-cultural country.
- To provide learning opportunities that enthuse, engage, and motivate children to learn and foster a sense of curiosity and wonder at the beauty of the world around them.
- To encourage in children a commitment to sustainable development and an appreciation of what 'global citizenship' means.
- To make sense of their own surroundings through learning about their own locality and the interaction between people and the environment.
- To develop the geographical skills, including how to use, draw and interpret maps of different scales, and the vocabulary necessary to carry out effective geographical enquiry.
- To be able to apply map reading skills to globes and atlas maps and identify geographical features.
- To formulate appropriate questions, develop research skills and evaluate material to inform opinions.
- To enable children to work geographically in a range of appropriate contexts, using a variety of materials and equipment including other people's experiences and knowledge.

## **Curriculum**

The children undertake a broad and balanced programme that takes account of abilities, aptitudes and physical, emotional and intellectual development. Through geography the children learn a range of skills, concepts, attitudes and methods of working.

### **Early Years**

Understanding the World (the strands People and Communities and The World) is taught and facilitated in nursery and reception as an integral part of the project work covered during the year. We relate the geographical aspects of the children's work to the objectives set out in the Early Years curriculum which underpin the planning for children aged three to five. Planned activities, stories and enhancements help their understanding of the world through activities such as finding out and talking about different places, habitats and investigating our locality.

### **Key Stage 1**

During Key Stage 1, pupils investigate their local area and a contrasting area in the United Kingdom or abroad, finding out about the environment in both areas and the people who live there. They also begin to learn about the wider world. They carry out geographical enquiry inside and outside the classroom. In doing this, they ask geographical questions about people, places and environments, and use geographical skills and resources, such as maps and photographs.

### **Key Stage 2**

During Key Stage 2, pupils investigate a variety of people, places and environments in the United Kingdom and abroad, and start to make links between different places in the world. They find out how people affect the environment and how they are affected by it. Pupils carry out geographical enquiry inside and outside the classroom. In doing this, they ask geographical questions, and use geographical skills and resources, such as maps, atlases, aerial photographs and ICT. Children will develop geographical enquiry skills, including asking geographical questions, collecting and recording information and identifying different views. They will acquire the appropriate practical skills associated with Geography, including using suitable vocabulary, fieldwork techniques and maps, plans and atlases. Pupils will use secondary sources of information with accuracy, including aerial photographs, satellite images, etc. As well as making its own distinctive contribution to the school curriculum, geography contributes to the wider aims of primary education. Teachers will ensure that links between subjects are maximized.

### **Progression and Continuity**

The school uses a variety of teaching and learning styles in geography lessons. Our principal aim is to develop the children's knowledge, skills and understanding in geography. We use a variety of teaching and learning styles in our geography lessons. We believe in whole-class teaching methods and combine these with enquiry-based research activities. We encourage children to handle artefacts and to ask as well as answer geographical questions. We offer them the opportunity to use a variety of data, such as maps, statistics, graphs, pictures, aerial photographs, geographical footage and we enable them to use IT in geography lessons where this serves to enhance their learning. Wherever possible, we involve the children in 'real' geographical activities, e.g. research of a local environmental problem, visiting relevant sites and carrying out fieldwork. We recognise the fact that we have children of differing ability in all our classes, and so we provide suitable learning opportunities for all children by matching the challenge of the task to the ability of the child. We achieve this through a range of strategies which are differentiated by task, expected outcome and/or support from peers or adults.

### **Health and Safety**

Visits and fieldwork are an essential part of the Geography Curriculum helping to develop geographical enquiry and skills. Children learn best when the learning environment is ordered and they feel safe, any visit should be well organised and provide a stimulating and valuable experience. The pupils should prepare well for the visit and, on their return, use the experience to good effect in the classroom. The class teacher, or leader, should plan the visit meticulously, with the pupils' safety and welfare paramount. Please see the Policy for Educational Visits for detailed information.
